

## */ Marley DH Distribution Basin Cover /*

Enhance the performance of your large crossflow cooling tower with Marley DH distribution basin covers. This environmentally responsible solution inhibits the biological growth of algae in the warm circulating water by blocking the ultraviolet radiation of the sun. It minimizes the need to add costly chemicals to the circulating water—especially in these environmentally-conscious times—and saves costly maintenance hours by keeping basins clear of airborne debris and leaves.

DH distribution basin covers provide generous head room for maintenance at the flow-control valves. The horizontal open area along the fan deck level allows natural light and ventilation within the enclosure. Removable panels provide access for valve or equipment replacement.

This durable low-maintenance structure is erected of pressure-treated Douglas fir or redwood lumber and enclosed with 8-ounce FRP (fiber reinforced polyester) corrugated casing material. All lumber meets or exceeds Marley and CTI specifications for cooling tower construction. Specify DH Distribution Basin Covers on your new or existing large crossflow cooling tower.

## */ Marley DH Distribution Basin Cover /*

### */ Suggested Specification /*

Hot water distribution basins and distribution piping shall be enclosed with a sloping roof covered structure. The structure shall be enclosed with 8-ounce FRP corrugated casing material. Structure shall be erected of pressure-treated Douglas fir or California redwood lumber. All lumber shall meet or exceed CTI specifications for cooling tower construction.

DH distributions basin covers shall provide generous head room for maintenance within the enclosure. A horizontal open area along the fan deck level shall provide natural light and ventilation within the enclosure. Removable panels shall be provided to allow access for valve or equipment replacement.
