

IEC series

INDUSTRIAL EVAPORATIVE CONDENSER

SGS
REFRIGERATION

Introducing the SGS Refrigeration IEC – The Only Industrial Evaporative Condenser Available in the Market

- **Fully hot-dip galvanized after fabrication – 1.5-2X the protective zinc layer vs. G235 mil galvanized**
- **All nut and bolt construction – no unneeded penetrations in the enclosure or basin**
- **Coil sections have integrated lift points and fewer connection points to the basin – faster installation**

Our innovative blow-through evaporative condenser design begins with quality engineering and manufacturing that incorporates the industrial-grade components and materials you demand. It includes features that speed up installation times and fewer field-assembly steps to get your condenser operational sooner.

Plus, once installed, expect uncomplicated, easy start-up with simplified routine inspections and maintenance for the life of the product. The SGS **Industrial** Evaporative Condenser (IEC) is the logical choice for your industrial heat rejection.

Product Construction Benefits:

- Hot-dip galvanized components are more robust than mill galvanized
- Fan system:
 - Fully welded (no tack welds) with 6 fan shaft supports specially designed to balance air flow across the coil
 - 340 degree fan shrouds are robustly constructed and bolted to the basin section in both front and back
 - All drive belts are heavy duty industrial banded design
- Wash-off flanges angle down to prevent water and debris accumulation – increasing hygiene and reducing biologic contamination

Quality. Delivered.

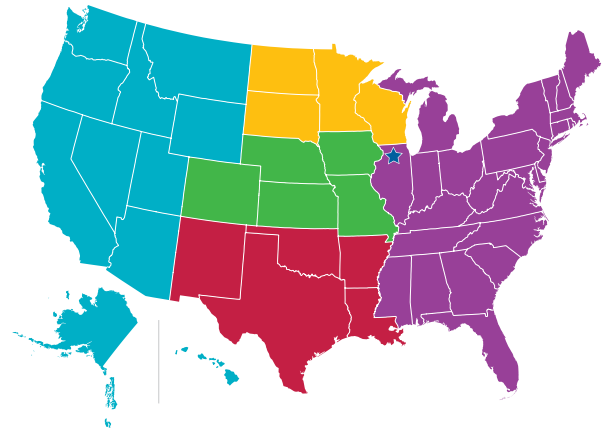

Installation Benefits:

- Self-aligning top and bottom modules require only four bolt connections for faster field installation
- Both top and bottom modules include built-in spreader bars for simplified crane lifts
- Sumps are double pitched toward the outlet for proper drainage
- 3D header collar provides a positive seal against the casing and header pipe to help prevent leaks at the connection site

Operational Advantages:

- **Exclusive HDGAF (hot-dip galvanized after fabrication) casing resists corrosion and extends product life**
 - Condensers using mill galvanized construction have reduced zinc protection where holes are drilled and panels are bent during fabrication
- Motors are covered and protected from environmental exposure
- Motors are mounted for easy vertical-belt tensioning
- Large, convenient step is mounted with no sump-penetrating fasteners

For your airside industrial refrigeration applications, rely on SGS Refrigeration products from SPX Cooling Tech, LLC.
