

## Overview

The MarleyGard Basin Filter alleviates maintenance concerns and saves time and money by simplifying the cleaning of a cooling tower's hot water basin and protecting cooling tower components.

The patent-pending Basin Filter comprises a nylon filter and 304 stainless steel. The Basin Filter helps extend equipment life by capturing mineral scale, pipe rust, fibers and other debris and preventing them from reaching other components downstream – including cooling tower fill, pump impellers and heat exchangers.

MarleyGard Basin Filters are available to install in new Marley NC® Cooling Towers, with or without nozzle cups, and also as an easy-to-install "retrofit" filtration system kit for factory-assembled, crossflow cooling towers.

## Benefits

- Reduces frequency of maintenance and cleaning costs. Forget monthly basin cleaning; simply replace the Basin Filter media every 6 months
- Installs easily in less than an hour
- Reduces risk of basin overflow between bi-annual cleanings by ensuring free flow of water to nozzles, even with up to 75% heavy debris blockage
- Conserves water by eliminating filter backwash

Marley NC 8300 Installation

## Advantages

- Guards against premature component replacement and helps maintain cooling tower performance
- Provides up to double the clog resistance when compared to a basin without the Basin Filter
- Withstands harsh cooling tower environments
- Captures debris #4 mesh or larger

Replacement intervals of up to 6 months is recommended.
