

Marley FB20MA clog-resistant film fill is constructed of fire-retardant PVC sheets mechanically assembled without the use of adhesives to form blocks of cooling media. The surface microstructure facilitates air/water mixing and increases the surface cooling area. The offset vertical flutes provide directional changes in air and water flow to increase cooling and promote thermal efficiency while substantially reducing the occurrence of fouling.

- Offset vertical-flute film fill
- Efficient thermal performance
- Flame spread rating is less than 25 per ASTM E-84 and is considered self-extinguishing
- Low maintenance
- Withstands foot traffic
- Resists erosion from water spray
