

The Marley FC18 clog-resistant film fill is constructed of fire-retardant PVC sheets bonded to form blocks of cooling media. The microstructure on the surface of the sheets increases the cooling area and aids the cooling process. The vertical flutes allow even water flow through the media to minimize fill fouling.

- Acceptance at major utility as non-fouling film fill
- Flame spread rating is less than 25 per ASTM E-84 and is considered self-extinguishing
- Low maintenance
- Withstands foot traffic
- Resists erosion from water spray
