

VC25 clog-resistant splash fill is constructed of polypropylene sheets mechanically assembled without the use of adhesives to form blocks of cooling media. The surface microstructure facilitates air/water mixing and increases the surface cooling area. The offset vertical channels provide directional changes in air and water flow to increase cooling and promote thermal efficiency while substantially reducing the occurrence of fouling. This fill is ideal for counterflow applications with very dirty water and can accommodate hot water temperatures up to 75° C (167° F).

- Mechanical assembly
- Low maintenance
- Withstands foot traffic
- Polypropylene
